Version 6 · the ixi-model edition · built only from the vetted v5 fact base · earlier editions stay untouched at their own routes

How this book reads a song

This book takes a sustained vocal note, **holds it against the chord that moves underneath**, and reads the interval that note becomes together with the feeling that interval carries.

That is the ixi close reading the chapters use, applied song by song wherever the vocal holds still long enough for the harmony under it to change its color.

Each chapter follows one song section by section.

Every chord is named twice, Roman numeral and letter, so the function and the sound both stay visible.

Every notation figure comes from a vetted source.

Every harmonic observation pays off in a feeling, because a theory point with no emotional read is only half a sentence.

Method and sources

Nothing in this edition is re-derived.

Every claim reuses the vetted v5 fact base: the Songsterr GP charts, the audio-truth models where they exist, and stem analysis, meaning bass pitch-class roots, vocal MIDI aligned to the sung words, and per-window chord roots read straight off the bass and guitar stems.

The v5 restart caught six false claims that earlier drafts had copied forward.

This edition is built from what survived that check, and from nothing else.

Asleep in the Trunk

F, THIRD WITHHELD FROM THE FOUNDATION · DROP C · 3/4

The album opens on a stack that keeps the one note that would fix the key out of the foundation and only in the quieter layers above.

The bass and the rhythm guitar hold F with no third; the mid guitar (triads) and the lead (arpeggios) carry the third when they enter.

Per the 3-guitar-derivation MIDI, the rhythm guitar (power fifths) plays roughly 720 notes almost entirely on C, F, B $\flat$ and G with A $\flat$ 54 times and A $\sharp$ 11 times; the middle guitar (triads) plays 1080 notes with A $\flat$ 128 and A $\sharp$ 64; the lead guitar (arpeggios) plays 789 notes with A $\sharp$ 52 and A $\flat$ 85.

So the third is not literally missing from the recording; what is missing is the third from the foundation, from bass and rhythm guitar, where the ear leans first. The voice reaches for A natural over that foundation, and the album's whole close-reading project starts here.

The intro · the bass riff alone spells root, $b7$ and 5 with no third

The track opens with its whole architecture carried by the bass alone.

The figure walks three pitches around F, E^b and C, **the root, the flat seven and the fifth of an F-centered field.**

No third appears anywhere in this riff, so the bass states an F with no major third and no minor third in it.

That absent third becomes the central question of the entire song.

The bass carries the terrain for four bars with no rhythm guitar and no voice present yet.

Four bars of bass alone establish the F-centered field, root and ♭7 and 5, with no voice yet in the room.

♩ = 116

Figure 1.2 · Verse: the vocal descending to A $\natural$ over the E $\flat$ –F–C engine.

FAVORITE MOMENT The word "for" putting the vocal on A $\natural$ 3, the major third, over a bass line and a rhythm guitar that both spell F with no third at all. Both the GP chart and the vocal stem put A-natural on that exact word.

The pre-chorus · B $\flat$ and C over an F pedal, then A $\natural$ returns on "make"

The pre-chorus keeps the floor on a single F pedal and lets the vocal swing across it.

The bass plants F under almost every beat, with brief E $\flat$ and C touches around it. The rhythm guitar holds an F sus and F7 shape, **the third still left out of the foundation voicing.**

The voice settles on B $\flat$, the suspended fourth above F, for the opening lines about cooking and washing.

It steps up to C, the fifth, for feeding you grapes, then reaches **A $\natural$ once more on the word "make"** in make you a symphony.

The same A-natural from the verse returns as the brightest third in the mix, the sung version rising above the mid and lead guitar layers that state it more quietly.

That A on "make" ties the section back to the verse thesis.

The promises pile up as the harmony stays fixed on F.

One sung major third carries the strongest lift in the pre-chorus.

♩ = 116

I cook make
 Fsus4 would for you feed you grapes F7(no3) you a sym pho ny

Vocal

Bass (F pedal)

Figure 1.3 · Pre-chorus: B $\flat$ (4) and C (5) rocking over the F pedal, A $\natural$ on "make".

FAVORITE MOMENT The word "make" arriving on A $\natural$ again, the voice supplying the major third over an F pedal that states no third of its own.

The chorus · F and C bass with a flat-side touch, the voice circling C and D

The chorus moves the floor for the first time.

The bass MIDI (windows 90 to 150 seconds) is dominated by F and C, with a smaller number of D $\flat$ (=C $\sharp$) hits from the flat side.

The rhythm guitar stays on power chords, so the foundation still leaves out the thirds that would define major or minor.

The mid and lead guitar layers do add some triad-and-arpeggio color above that foundation, but the vocal line still carries most of the song's color and tension.

The chorus gets its pressure from that split.

The band moves through F and C with a flat-side lean toward D $\flat$, and the melody circles C, D, C $\sharp$, and B against that floor.

The harmony stays blunt, and the vocal supplies the sharper detail.

That is why the chorus feels more exposed than the guitar part alone would suggest.

The verse's A natural does not carry forward into the chorus vocal line; the vocal MIDI in the 90 to 150 second window is heavier on C, D, C#, and B than on A or E. The chorus is not where the album's brightest raised tone appears. That reveal happens later, in the outro window.

$\text{♩} = 116$

I think ing we're I
D $\flat$ 5 ($\flat$ VI) keep F5 (i) that still in love C5 (V) tried

Vocal

M7 (E $\flat$) 5 (C) dominant

Bass ($\flat$ VI-i-V wheel)

The rhythm guitar rings F sus2 and F sus4 and plain F5, **the suspensions trading the missing third for an open second or fourth.**

The voice floats C and E^b over that pedal on you love the sound and the long beating-heart line.

One detail carries the section.

The mid and lead guitar layers flicker an F minor shape here, A^b audible for the first time in the foreground of the mix; the 3-guitar-derivation MIDI has A^b as the top non-root pitch class in both the mid (128 hits across the song) and the lead (85 hits), and this section is where those A^b hits push forward.

The mid layer leans minor for those bars, and the voice has leaned major throughout the earlier sections.

So the two thirds sit in the same song from different sources.

The mid guitar states the minor third openly here, the voice has stated the major third openly through the verses and pre-chorus.

The pedal holds F under both readings without picking a side.

Figure 1.5 · Y part: the F pedal, the rhythm guitar holding a bare F5, the mid guitar cycling A^b and A^h inside its own triad layer, the friction living inside the guitar section itself.

FAVORITE MOMENT The mid guitar's F minor flicker in the Y part, A^b pushing forward for the first time in the foreground, against the voice that kept reaching for A natural.

The outro · the dominant resolves, and the vocal E natural finally appears

The outro states the cadence the earlier sections held back.

The bass walks B^b5 up to C5 and home to F5 across the closing minute.

C5 is the dominant the verse and chorus circled through the whole song, and here it finally falls to F.

In this same window (roughly 210 to 240 seconds in the vocal stem MIDI) the vocal MIDI puts E natural into the top three pitch classes for the first time in the song.

That is where the E^h chorus-answer claim from earlier drafts of this book actually belongs.

The major seventh of F is a sung tone, and it appears in the outro against a bass that has just moved off the flat side and onto the dominant.

The resolution arrives without picking a quality.

The last chords are F5 and F sus2, the home root with a fifth and an open second, **the third still absent at the final cadence.**

The song answers its dominant and keeps its central question open in the same gesture.

So the close stays true to the opening.

The bass riff spelled F with no third in the first four bars, and the last bar spells F with no third again.

The rhythm guitar and the bass never spelled a third across the whole song; the mid and lead guitars did, in quieter layers, and the vocal placed both thirds and the major seventh into the front of the mix.

♩ = 116

the dominant resolves home

B ♭ 5 (iv) C5 (V) F5 (i) Fsus2→F5

Bass (resolution, still third-less)

no third, to the en

Figure 1.6 · Outro: B ♭ 5 to C5 to F5, the resolution that still carries no third, with the vocal E ♮ arriving in this window.

FAVORITE MOMENT The very end: C5, the dominant the song circled all record, resolving to F5 and Fsus2, and the vocal E natural sounding for the first time as a real presence in the top three pitch classes.

Coda

The opener hands the album its first lesson in how this band arranges.

The bass and the rhythm guitar build the foundation on power fifths and open suspensions, and the mid and lead guitars and the voice all reach for the third above that foundation.

Brightness on this record comes mostly from the singer.

The rhythm section supplies weight, pedal and suspension; the mid guitar and lead guitar add a quieter layer of thirds and arpeggio color; and the loudest lift the song owns arrives in the voice reaching for A natural in the verses and E natural in the outro over a foundation of open fifths.

SOURCES

Vocal stem MIDI · bass stem MIDI · mixed guitar stem MIDI · 3-guitar-derivation MIDI (Gtr-Rhythm pwr5, Gtr-Mid triad, Gtr-Lead arp) · Songsterr GP MIDI (chord and tab ground truth). Intro and verse trace to the GP chart measures 1 to 20, corroborated against the transcribed vocal.

Pre-chorus, chorus, Y part and outro grounded by fresh stem analysis in this pass: 30-second-window pitch-class profiles on the vocal MIDI, 20-second-window root profiles on the bass

MIDI, and per-track pitch-class counts on the 3-guitar-derivation MIDI (rhythm-triad-lead) as the guitar-layer evidence.

Honesty notes (2026-07-07 verification pass).

First, the earlier draft's "chorus D^b5 to F5 to C5 wheel with vocal E^h" did not clear the vocal MIDI: E natural does not enter the top pitch classes until the 210 to 240 second window, which is the outro. The chorus section above states only what the F and C bass and the C-D-C[#]-B vocal actually show; the E^h modal reveal has been moved to the outro section, where the MIDI puts it.

Second, the earlier draft treated the album's guitars as a single voice and claimed "the third never sounds in the guitars." The 3-guitar-derivation MIDI shows three layered parts: a rhythm guitar in power fifths (essentially third-less: 720 notes, A^h only 11 times), a middle guitar in triads (1080 notes, A^b 128 times and A^h 64 times), and a lead in arpeggios (789 notes, A^h 52 times, A^b 85 times). The corrected claim is that the third is missing from the foundation (bass and rhythm guitar), not from the recording as a whole, and the vocal's A^h is the loudest instance of the major third rather than the only one.

2

The Alligator

G MAJOR · DROP C · 4/4 · 120 BPM

The second track builds a whole song out of one guitar shape and a bass that keeps shifting its meaning.

The rhythm guitar sounds G, A and D and states no third, so the chord's identity comes entirely from the bass moving underneath it.

The fretting hand stays frozen on one voicing while the harmony flips from home to a borrowed flat-three and back.

What sounds like a chord progression is really one stack heard against two different floors.

The engine · one voicing, a I to $\flat$ III bass, the chord decided by the bass alone

The song turns on one rhythm-guitar voicing and a bass that keeps shifting its meaning.

The guitar sounds G, A and D across every bar, **the root and ninth and fifth of G with no third inside it.**

Over a G bass that shape works as G add9, and over a B $\flat$ bass the very same three notes sound a B $\flat$ six-nine.

The chord identity comes from the bass by itself.

Two bars of G give way to two bars of B $\flat$, a I to flat-three move repeated to drive the whole form.

The fretting hand stays on G-A-D while the bass alone swings the chord from I to $\flat$ III.

This is the central trick stated in the first cycle.

One stack, two chords, the bass doing all the work.

The chord moves entirely in the bass as the guitar's G, A and D sit still.

$\text{♩} = 120$

2 2 5 5

Figure 2.1 · The engine: G-A-D held over a G-to-B $\flat$ bass (I to $\flat$ III).

FAVORITE MOMENT The same G-A-D voicing working as G add9 over a G bass and as B $\flat$ six-nine over a B $\flat$ bass, the chord changing while the hand stays still.

The voice supplies the third · B is the M₃ of G the guitar omits

The rhythm guitar leaves the third out for the entire song.

The G plus A plus D voicing gives root and ninth and fifth and leaves the third out completely.

On the second cycle the vocal enters on B, the major third the G-A-D voicing leaves out.

Over the G chord the singer sings B, the major third of G, the exact tone the voicing omits.

Over the B $\flat$ chord the singer moves to C, the ninth of B $\flat$, a bright color above the borrowed flat-three.

The sung B and C are the only third and ninth sounding across the twelve-bar cycle.

The thesis matches the album opener almost exactly.

The instruments give a chord with no third and the vocal becomes the third.

The third is missing from every chord until the last bar of the form.

♩ = 120

Bass · 4-str tab (Drop C)

Figure 2.2 · Vocal B (M3 of G) and C (9 of B♭) over the third-less stack.

FAVORITE MOMENT The vocal B over the third-less G chord, the singer supplying the major third that the guitar does not play, then moving to C as the 9 of B♭.

The bitonal lead · F# stays in G while the bass moves to B♭

The lead guitar holds F# through the G sections, **the major seventh of G, a high sustained tension over the home chord.**

When the bass moves to B♭ the lead stays inside G major and keeps that F#

ringing.

So the lead plays one key while the bass implies another.

That disagreement is the quiet engine under the riff.

The bass says flat-three and the lead answers in the home key, **a small bitonal rub on every B^b bar.**

The B^b section even stacks C and B and F[#] in the lead, a cluster pulled straight out of G major.

The song keeps two tonal stories running at once.

The bass walks its I to flat-three path and the lead stays in G major.

Both readings, G major and the B^b borrowing, stay audible at once.

♩ = 120

G B^b

2 2 5 5

Figure 2.3 · Lead F# (M7 of G) sustained over the moving bass.

FAVORITE MOMENT The lead's F# ringing as the major seventh of G straight through the B $\flat$ bars, the high voice refusing to follow the bass into the flat-three.

The seam walkdown · a fast B $\flat$ to A $\flat$ to G stitches the loop home

Every return from the B $\flat$ section back to G flags itself in the bass.

The player stays on B $\flat$ for most of the bar, then drops **a fast three-step walk of B $\flat$ to A $\flat$ to G.**

The steps move in thirty-second notes, a quick chromatic slide into the downbeat.

The walkdown lives at the seams of the form, bars four and eight and ten.

It is a small figure that stitches the flat-three back to home each time.

The B $\flat$ to A $\flat$ to G slide pulls each loop back to the downbeat.

That tiny move gives the loop its forward motion.

The two-chord engine could feel static across so many bars.

The walkdown keeps shoving the form back to its beginning.

$\text{♩} = 120$
tacet

Vocal (tacet)

The musical score is presented in three staves. The top staff is for the Vocal, marked 'tacet'. The middle staff is for the Rhythm guitar, showing a G A D chord held through the seam. The bottom staff is for the Bass, showing a 4-string tab for a seam walkdown from B flat 6 to G. The tab includes a chromatic slide from B flat to A flat to G, labeled 'walk B flat A flat into G'. The tempo is 120, and the time signature is 4/4.

Figure 2.4 · The B $\flat$ to A $\flat$ to G seam walkdown.

FAVORITE MOMENT The thirty-second-note B $\flat$ to A $\flat$ to G bass slide at every seam, a three-step chromatic shove that keeps the two-chord loop from going static.

The cadence · the third the guitar left out all song finally arrives in the bass

The chorus ends on a chord the rest of the song avoids.

The guitar stack keeps its shape while the bass walks G to B $\flat$ to G and up to B.

On that last beat the bass gives B, the major third of G, the exact tone the rhythm guitar left out until now.

So the third arrives at the cadence, and it arrives in the bass.

The voice supplied the third all the way through, and the final chord hands that job to the lowest voice.

The G over B first inversion closes the phrase with the missing tone now sounded.

Every bar pointed at this single low B.

The guitars stated no third, and the cadence gives one.

The final bar sounds the low B, the major third missing until that point.

♩ = 120

Figure 2.5 · The G/B cadence: the withheld third arriving in the bass.

FAVORITE MOMENT The final G/B, the bass reaching B, the major third the guitars withheld for the whole song arriving at last in the lowest voice.

Coda

The Alligator is the album opener's thesis carried into a second shape. Asleep hid the third inside a pedal and a wheel, and here the third hides inside a frozen hand and a shifting floor.

The band writes chords by subtraction and lets the singer restore what the guitars take out.

The final low B is the payoff, the withheld tone spoken at last by the one voice that stayed silent about it all song.

SOURCES

The vetted audio-truth model of The Alligator (five-track, audio-verified via Moises) plus the Songsterr GP chart.

The audio-truth model corrects the raw Songsterr auto-extraction, which mis-read the song as G minor in 5/4 with sus and dim chord names.

Grounded reading: G major, Drop C, 120 BPM, a twelve-bar I to flat-three cycle closing on G/B.

Interactive sheet: [/believeyoume-alligator-v5](#)

3

The Mutiny

B $\flat$ · DROP C · 4/4 · 130 BPM

The Mutiny moves in three stages.

A root clamp crushes the whole band onto B-flat, then a flat-side opening lets the bass lead and the vocal follow it down, then a late body brings the major third into voice and guitar at once, over a floor that never clears.

Where the first two songs hid the third behind a pedal or a frozen voicing, this one weaponizes unison.

The band plays one note until the missing color becomes the loudest thing in the room.

The intro · a bare B-flat power chord, root and fifth, no third

The lead guitar opens alone on a B-flat power chord, the root and the fifth fretted on a Drop-C neck, **more than a hundred transcribed notes built on B-flat and F**. No third enters the texture.

The bass leans on B-flat with a dip to G-flat, and the voice keeps out of singing range through these bars.

A fifth with no third keeps the question open.

You cannot hear major or minor in it, and the song lets that hang at 130.

The intro states the root and withholds the color the rest of the song keeps fighting over.

$\text{♩} = 130$
 $B \flat 5$ (root + 5)

Lead gtr

Bass

Figure 3.1 · Intro: $B \flat 5$, root and fifth, the bass dipping to $G \flat$.

FAVORITE MOMENT A hundred guitar notes on B-flat and F, root and fifth, the third left out of the intro entirely.

The locked verse · the whole band crushed onto B-flat, root and octave only

The arrangement narrows until every part hits the same pitch class.

From roughly 34.7 to 48 seconds **the vocal gives twenty-six straight B-flat notes**, the guitar strikes B-flat underneath in the same register, and the bass sustains B-flat across octaves.

The tightest window drops even the fifth, leaving mostly root and octave with no harmonic padding at all.

The singer sits down inside the band here, joining the instrument grid so the voice becomes another part of the drone.

That choice makes the missing third active, because the ear keeps waiting for a G or a D to clarify the color, and Shiner withholds it.

The effect runs harsher than a power chord.

A fifth at least gives the ear something to lean on, and this passage takes that away too.

The verse builds its pressure from the refusal, pinning the whole band to one note until something has to move.

Figure 3.2: Musical notation for the locked verse.

The notation shows three parts (Vocal, Guitar, Bass) in 4/4 time, all playing a single note (Bb) for 26 measures. The tempo is marked as $\text{♩} = 130$.

Vocal (26x Bb): The vocal line is in treble clef. It consists of a single note (Bb) in the first measure, followed by three measures of rests. The note is labeled "voice on Bb" and "root". The final measure is labeled "(26x total)".

Guitar (root only): The guitar line is in treble clef. It consists of a single note (Bb) in the first measure, followed by three measures of rests. The note is labeled "Bb, no 5th".

Bass (octaves): The bass line is in bass clef. It consists of a single note (Bb) in the first measure, followed by three measures of rests. The note is labeled "Bb", "8va", and "Bb".

The notation is organized into four measures, each containing a staff for the Vocal, Guitar, and Bass parts. The first measure shows the initial note, and the subsequent measures show rests, indicating a sustained drone.

Figure 3.2 · The locked verse: voice, guitar and bass all on B ♭.

FAVORITE MOMENT Twenty-six straight B-flat vocal notes over a guitar and bass also on B-flat, the fifth dropped, mostly root and octave.

The verse opens · the bass moves to the flat side and the vocal follows it down

When the lock breaks the bass moves first, pushing off B-flat toward G-flat and A-flat, **the flat-side roots that carry the song's weight.**

The guitars follow that darker pull into the same flat-side shapes.

The vocal does not break free into a bright major third here; it keeps inside the same gravity, working mainly through G-flat, A-flat, and B-flat while the section loosens.

The drama of this part is the band learning motion after the long root clamp.

The bass gives the movement its weight, the guitars thicken the flat-side frame, and the voice stays close enough to the instruments that the loosening feels contained.

The section widens the same flat-side pressure toward G^b and A^b without resolving.

A high D does flicker through the vocal in this region, and the guitars touch D as early as 22 and 52 seconds.

The major third is in the room.

It has not yet become the thing the song leans on, so **the verse opening moves as shadow in motion more than light arriving.**

♩ = 130
voice on Gb Ab Bb D flicker

Vocal (flat-side)				
	♭ 6	♭ 7	root	M3
Guitars (no 3rd)				
	0 3	1 6	3 4	3 4
Bass (leads)				
	3	6	1	1

Figure 3.3 · The verse opens: bass leading to G ♭ and A ♭, the voice following.

FAVORITE MOMENT The bass moving to the flat side with the vocal following it down through G-flat and A-flat, the D only flickering.

The body · D becomes a shared pressure, voice and guitar together

Deep in the long body the major third finally takes over.

Around 175 to 220 seconds the vocal uses D more clearly, and the guitars bring D into their notes at the same time, so **the brightness is shared across the band rather than carried by one throat.**

The bass stays busy underneath, more than five hundred notes, and it keeps dragging the floor back through B-flat and G-flat.

This is the closest the song comes to release.

The top of the arrangement brightens as voice and guitar agree on the D, while the bottom keeps its flat-side weight and refuses to let the chord fully open.

The strain comes from the D on top and the B $\flat$ and G $\flat$ floor pulling at once.

So the third belongs to the whole band.

It arrives late, it arrives shared, and it never clears the heavy floor underneath.

The shared D brightens the top.

The B $\flat$ and G $\flat$ floor stays heavy.

$\text{♩} = 130$

D C B $\flat$ D

Vocal (D now)

Guitars (D shared)

Bass (drags to B $\flat$ /G $\flat$)

Figure 3.4 shows a musical score for a four-measure phrase. The tempo is 130 bpm. The key signature has one flat (B-flat). The time signature is 4/4. The score is divided into three parts: Vocal, Guitars, and Bass. The Vocal part has whole notes: D, C, B-flat, D. The Guitars part has chords: B-flat + D, C, F, B-flat. The Bass part has eighth notes: B-flat, G-flat, B-flat, B-flat. Fingering is indicated by numbers 1-5 on the strings.

Figure 3.4 · The body: the shared D over a bass dragging through B $\flat$ and G $\flat$.

FAVORITE MOMENT D becoming a shared pressure around 175 to 220 seconds, voice and guitar both bringing it while the bass pulls toward B-flat.

The outro · the flat second returns and the song stops without clearing

The bass narrows back toward B-flat after the busy body, with a touch of D and E-flat.

The guitars thin to B-flat and E-flat, and **a B natural brushes in as the flat second, the Phrygian shade.**

The vocal closes on B-flat and D, keeping the major third in the air one last time as the field goes dark around it.

The song ends with no clean resolution.

The flat-side floor stays, the flat second darkens the close, and the brightness the body found never fully wins.

The Mutiny stops on the same heavy ground it ran on, the third still pressing against it.

$\text{♩} = 130$

B ♭ D E ♭ B ♭

Figure 3.5 · Outro: the $\flat 2$ shade against the held major third.

FAVORITE MOMENT The flat second returning at the close, the voice holding the major third over a floor that stays dark.

Coda

Three songs in, the album's grammar is set, and each track finds a new way to spend it.

Asleep put the missing third in one reaching voice, The Alligator hid it in a frozen hand, and The Mutiny grinds the question down to a single repeated note and makes the whole band carry it.

The third arrives late, shared, and unresolved, which is the darkest reading of the album's central move so far.

The record keeps proving that what a band leaves out can shape a song as firmly as what it plays.

SOURCES

The Songsterr GP file (Drop C) plus the vocal, bass and guitar stem MIDI's, corrected against the three stems in the 2026-06-16 MIDI fact-check.

Fixed model: root clamp, flat-side movement, late shared D pressure.

The score and the linked MIDI agree because both come from the same notes.

Interactive sheet: </believeyoume-mutiny-v5>

So Far So pedals D alone for seven bars, builds a third-less D mixolydian verse, finds D major when the voice sings the F-sharp the guitars leave out, drops a minor third to a B-flat chorus, swings to an Am/E bridge, and ends on a C-against-D clang.

Three tonal centers, one missing third, and a bass that opens and closes the song alone.

This is the album's structural showpiece, and it was the first sheet to reach the proof format.

The intro · the bass pedals D alone for seven bars

So Far So starts with one instrument.

The bass plays a D pedal in octaves, low D1 trading with D2, for seven full bars in Drop C tuning, and nothing else enters.

No rhythm guitar, no lead, no vocal, only the one pitch rocking between two registers.

The song builds its whole opening from a single note.

The voice arrives at bar seven, reaching A and G over that sustained D, and even then the bass keeps its pedal.

The opening states D as the floor and leaves the air above it empty.

Bar seven brings A and G over the D pedal, the fifth and the fourth with no third.

♩ = 130

D1

no gtr, no voc

Bass alone

Figure 4.1 · Intro: the D1/D2 octave pedal, bass alone.

FAVORITE MOMENT Seven bars of bass alone pedaling D in octaves, the rest of the band withheld until bar seven.

The verse · bass and voice alone, D mixolydian, no third in play

The verse keeps bass and voice with no guitars at all.

The bass keeps its syncopated D pedal, D1 on the dotted-quarter into D2 an octave up, one pitch class in two registers.

The voice circles three notes over it, A, G, and C, singing "I've been saved, I've been blamed." **Against the D floor those sit as the fifth, the fourth and the $\flat 7$.**

That flat seven, the C, gives the verse its mixolydian shade.

With no guitar to fret a third, no chord in the section states major or minor here.

The voice rides A, G, and C over a one-note bass, and the field stays open and modal.

The verse suspends its mode, waiting on a third that has not come.

$\text{♩} = 130$
I've been saved I've been blamed

Vocal

Bass (D pedal)

D pedal

The musical score is presented in two systems. The first system, labeled 'Vocal', shows the vocal melody in a treble clef with a 4/4 time signature. The tempo is marked as 130 bpm. The lyrics 'I've been saved I've been blamed' are written above the staff. The second system, labeled 'Bass (D pedal)', shows the bass line in a bass clef. It features a continuous D pedal point, which is a dotted quarter note followed by an eighth note, repeated throughout the section. The score is written in 4/4 time and D mixolydian mode.

Figure 4.2 · Verse: A, G, C (5, 4, $\flat 7$) over the D pedal.

FAVORITE MOMENT The voice circling A, G, C over a lone D pedal, the flat-seven C coloring it mixolydian with no third anywhere.

The later verse · the guitar enters on D5 and the voice finds the F-sharp

The rhythm guitar finally enters.

After a brief lead-in it settles onto a D5 power chord, D2 plus A2 plus D3, root and fifth and octave, ringing as whole notes over the continuing bass pedal.

Both the bass and the guitar plant on D with no third in either, the same open quality the verse ran on.

The voice resolves it.

It walks A, G, F-sharp across the bar and rests on the F-sharp, and **that F-sharp is the major third of D, the pitch the power chord refuses to fret.**

The singer tips the song to D major with one note the band leaves out.

The third arrives in the throat, the same move that runs across this record, the voice supplying the tone the guitars leave out.

♩ = 130

Bass

D

Figure 4.3 · Later verse: the vocal A, G, F# over the D5 power chord.

FAVORITE MOMENT The voice resting on F-sharp, the major third of D, the note the D5 power chord does not sound.

The chorus · the bass drops a minor third to B-flat and the voice climbs

The chorus makes the song's biggest move.

The bass leaves D and drops a minor third to B-flat, **a chromatic-mediant jump**, planting on B-flat with pulsing eighths.

The rhythm guitar voices a B-flat-maj7, root, major third, fifth, major seventh, with the octave third on top, then drops the seventh for the ninth, softening into a B-flat-add9.

The lead guitar mirrors that top voice, sustaining D then sliding to C, the major third easing to the ninth.

Over all of it the voice climbs.

It runs C, D, F, G and rests on G4, **the major sixth of B-flat, the highest pitch sung in the song**, more than an octave above the verse F-sharp.

"If you leave me now," the line goes, rising as the floor falls.

The bass drops a minor third as the voice lifts a major sixth, so the singer climbs into a brighter key the band has slid underneath.

♩ = 130

if you leave me now

Vocal (to G4)

Rhythm gtr (Bbmaj7)

Bass (Bb)

The musical score is written for three parts: Vocal, Rhythm guitar, and Bass. The tempo is 130 beats per minute. The key signature has one flat (B-flat). The time signature is 4/4. The vocal line starts on a whole rest, then moves up stepwise from G3 to G4. The rhythm guitar plays a Bbmaj7 chord for the first two measures and a Bbadd9 chord for the last two. The bass line starts on Bb, drops to B-flat in the second measure, and then moves up to A1 in the fourth measure. The lyrics 'if you you leave me now' are written above the vocal line.

Figure 4.4 · Chorus: B $\flat$ maj7 to B $\flat$ add9 under the vocal climb to G4.

FAVORITE MOMENT The bass dropping a minor third to B-flat as the voice climbs to G4, the song's highest note, a key apart from the floor.

The bridge · a third key, A minor over an E pedal, the voice spelling the chord

The bridge moves to a third tonal center.

The bass shifts to an E pedal, and the rhythm guitar, the lead, and the voice all stack an A minor triad over it, A and C and E.

The chord is Am over E, A minor in first inversion, neither the D of the verse nor the B-flat of the chorus.

This is the song's most unresolved zone.

The E in the bass works as the second of D or the dominant under A minor, **a half-cadence that commits to nothing**, suspended between modes for eight bars.

The voice spells the full triad on its own, E and A and C, the one place in the song where the singing lays out a complete chord without leaning on the guitars.

Then the bass lifts to F and walks down to B-flat, pulling the song into its final chorus.

Figure 4.5 · Bridge: Am over the E pedal, the voice carrying the triad.

Tempo: ♩ = 130

Lyrics: run now

Vocal (Am triad)

Guitars (Am)

Bass (E pedal)

Am Am/E

E pedal C tail

Figure 4.5 · Bridge: Am over the E pedal, the voice carrying the triad.

FAVORITE MOMENT The voice spelling a full A minor triad alone, E plus A plus C, over an E bass that resolves to nothing.

The outro · the bass alone again, a C against the D, ending unresolved

The song closes the way it opened, the bass alone with no guitar and no voice. One thing has changed.

A C1 sits below the D2 now, so the bass sounds a two-note C-and-D voicing, **the root and the flat seventh of D, a whole step grinding against itself.**

That flat seventh keeps the mixolydian color of the verse and avoids any clean cadence.

The song stops on the clang, the two notes a step apart, neither giving way to the other.

So Far So ends on the C-against-D clang, the $\flat 7$ grinding a whole step from the root.

$\text{♩} = 130$
C1 + D2 (root + $\flat 7$)

Bass alone (C + D)

2	2	2	2
0	0	0	0

Figure 4.6 · Outro: the C1 + D2 clang, root against $\flat 7$.

FAVORITE MOMENT The closing bass holding C against D, the flat seventh grinding a whole step from the root, the song stopping unresolved.

Coda

So Far So is the album's map in one song.

It opens on a bare floor, lets the voice color the mode, hands the voice the missing third, then spends its chorus and bridge proving the band can move the floor anywhere.

The singer keeps the light.

Three keys, and the third still arrives only in the throat.

The closing clang of C against D is the record's honesty about itself; the mode stays open because the band likes the question better than the answer.

My Mirror Hates Me

E, CONTESTED THIRD · STANDARD TUNING · 4/4 · 114 BPM

My Mirror Hates Me is the one song on the record off Drop C. **It stays on an E pedal under a third that refuses to commit**, the guitar sounding G-sharp then G-natural, the chorus stacking both thirds at once over a chromatic vocal walk, the bridge finally moving the bass, and the song walking off to a G-over-D at the close instead of ever choosing major or minor. Where the other songs withhold the third, this one plays both and lets them fight.

The intro · eight bars of a D-and-E drone, no third, no lead, no voice

My Mirror Hates Me opens by refusing to begin.

The rhythm guitar rings an open D-string and an open B-string together, D3 and E3, **the flat-seven and the root of E, sustained across eight unbroken bars.**

The bass stays on E1 underneath the whole stretch.

No lead guitar plays, no voice arrives, the two notes hang in the air with no third to color them.

Those two pitches carry no harmonic information on their own, a root and a flat-seven sounding open and unresolved.

The lead guitar enters at bar eight on a G-sharp, the major third, and **the song's central question starts there.**

The intro states the floor and leaves out the one tone that would settle it.

Everything that follows turns on whether that third comes out major or minor.

♩ = 114
b7
E (no 3rd)

Rhythm gtr (D + E drone)

Bass (E pedal)

Figure 5.1 · Intro: the D + E drone over the E1 pedal.

FAVORITE MOMENT Eight bars of an open D-and-E drone over an E pedal, root and flat-seven ringing with no third to settle them.

The verse · the third does not settle, major flickering against minor

The verse plants the song's whole tension in one undecided tone.

The bass drones E for nearly the entire section and the guitar drones a D over it, the flat-seven, the most-played guitar note on the track.

What moves is the third, and it will not commit.

The rhythm guitar flickers between G-natural and G-sharp, the minor third

The line sets the words "my mirror hates me" on that contested G-sharp, the major third sung over a guitar that will not pick a side.

Bass (E pedal)

D drone + G-nat D drone + G# G-nat G#

E pedal

Figure 5.2 · Verse: the contested third over the E pedal.

FAVORITE MOMENT The guitar flickering G-natural against G-sharp as the voice quietly insists on the major third, the song's whole tension held in one undecided tone.

The chorus · a clean E-minor-seven in the bass, every chromatic step in the voice

The chorus states the key the verse left implicit.

The bass leaves its E pedal for the first time and arpeggiates an E-minor-seven spread, E1 up to B1 to G1 to D2, the root and fifth and flat-third and flat-seven, **the cleanest minor statement on the record.**

The guitar drops its contested-third role here and the section runs on bass and voice.

The floor spells out the chord the verse kept blank.

The bass plays the most diatonic move on the song and the voice answers with the least.

It lifts to E-flat4, the leading tone a half-step under the root, the most foreign pitch to E minor, then walks a full chromatic descent through B-flat, A, A-flat, G, F-sharp, F-natural, E, and E-flat.

The climb comes to rest on F-sharp4, the ninth, then falls back through F-natural to E.

The verse asked its question with the contested third, and the chorus answers by sounding all twelve chromatic tones in the melody.

♩ = 114
M7

Em(maj7) 5 walk chromatic Em7 9

Vocal (chromatic walk)

Bass (Em7 arpeggio)

i (E) v (B) bIII (G) bVII (D)

Figure 5.3 · Chorus: the Em7 arpeggio under the chromatic vocal walk.

FAVORITE MOMENT The bass arpeggiating a clean E-minor-seven as the voice walks every chromatic step of the octave above it.

The bridge · the bass finally walks and the third plays out in real chords

The bridge moves the floor for the only time in the song.

The bass leaves the E pedal and walks, D down through B and G to A, cycling across the bars.

The rhythm guitar oscillates between a clean D major triad, D and F-sharp and A, and a stack of D-sharp and G-sharp and B, the E-major third and seventh and fifth voiced together.

The third question now plays out inside real chords instead of a single flickering note.

Bar ninety-nine plants the bass on D and the guitar spells D major and the lead drops to G-natural, the song's first chord off the pedal.

The bass then walks B to G to A inside the bar and the guitar shifts up to the D-sharp stack, **the major third stated with no E underneath it.**

The vocal rises to B, the fifth of E, as the harmony keeps moving.

The walk reaches no cadence, and bar one hundred three drops the bass back onto E1 for the verse to resume.

D B walk G A

Detailed description of Figure 5.4: The score is in 4/4 time with a key signature of one sharp (F#). It consists of three staves: Vocal, Rhythm guitar, and Bass. The tempo is 114 bpm. The bass line walks from D to B to G to A. The guitar plays D major, E major (M3+M7+5), and D major. The vocal line has notes corresponding to the harmony.

Measure	Vocal	Rhythm gtr (D maj / D# stack)	Bass (walks)
1	D	D major	D
2	E	E (M3+M7+5)	B walk
3	5	E (M3+M7+5)	G
4	D	D major	A

Figure 5.4 · Bridge: the bass walk under the D major and D# stacks.

FAVORITE MOMENT The bass walking D to B to G to A for the only time in the song, the contested third finally playing out over a moving harmony.

The outro · the song walks off to a G-over-D instead of choosing

The outro brings the question back and declines to answer it.

The voice takes the chorus chromatic walk into the lower octave, A-flat3 down through G, F-sharp, E, then low B and C, each step dwelt on at a quarter-note pace, touching every diatonic and chromatic step against the floor.

The third the whole song contested gets sung both ways here, the A-flat that is the major third and the G that is the minor, neither one settling as a resolution.

Then the song walks off rather than placing a tonic.

The bass moves to D and the harmony settles on a G over that D, the flat-third of E stacked over the flat-seven, **a chord that belongs to neither E major nor E minor**.

After a whole song asking whether the third is bright or dark, the close refuses to pick, sliding away to a G-over-D and leaving the question open.

The mirror never has to choose what it sees.

Tempo: ♩ = 114

Chords: Ab, Em, G, F#, Em(add9), E, B, C

Vocal (both thirds, neither held)

Guitar (walks off to G/D)

Bass (E pedal -> D)

The musical score is written for four measures. The key signature has one sharp (F#) and the time signature is 4/4. The tempo is 114 bpm. The vocal line descends chromatically from A-flat3 to C. The guitar line shows a progression from E (no 3rd) to G/D. The bass line starts with an E pedal and moves to D in the final measure.

Measure	1	2	3	4
Vocal	A-flat3	G	F#	E
Guitar	E (no 3rd)	E (no 3rd)	E (no 3rd)	G/D
Bass	E pedal	E pedal	E pedal	D (walks off)

Figure 5.5 · Outro: both thirds sung, the walk-off to G/D.

FAVORITE MOMENT The song walking off to a G-over-D at the close, sliding away from the contested third instead of ever choosing major or minor.

Coda

Five songs in, this is the album's thesis turned inside out.

The other tracks leave out the third and let the voice supply it; My Mirror Hates Me supplies both thirds at once and lets them grind.

The count is the story: 144 G-sharps against 133 G-naturals in the guitar, and a singer who votes major two to one.

The G-over-D walk-off is the record's most honest ending so far, a chord outside both keys, a mirror that reflects the question back.

6

Endless Summer

B $\flat$ MAJOR · DROP C · 4/4 · 140 BPM

Endless Summer is the album's clearest study in **the voice and the chord sounding the same tension together**. The rhythm guitar keeps a B-flat frame and shifts one added tone every bar, a major third in the bass, then a

suspended fourth, then a ninth, then the major third again, and the voice sings that added tone every time the chord brings a new one, walking **D, E-flat, C, D** in step with the added color underneath. In the next section the same voice does the opposite work: a single half-step from D to C-sharp turns the home chord over from major to minor while the bass never moves. The close frames the home chord against its own dominant, B-flat rocking against F-seven-suspended, and ends bare, root and fifth, third stripped out.

Across the record the voice supplies the third the power chord leaves out. In this song the chord actively spells its own extensions and the voice doubles them, one to one, four bars running. That agreement is what makes the third-flip in the next section so sharp, the same voice that walked in lockstep with the harmony then bends a half-step and switches the whole home chord.

The verse cell · vocal and chord doubling each added tension

The rhythm guitar holds a B-flat power chord throughout the verse, and the bass walks underneath through four one-bar shapes: B-flat over D, then B-flat suspended fourth, then B-flat with an added ninth, then back to B-flat over D. Each bar the chord shifts a single added tone above the B-flat root, and the vocal walks in step with it.

Bar one, the chord adds a **major third** in the bass and the vocal walks in on **D**, the major third.

Bar two, the chord adds a **suspended fourth** and the vocal moves to **E-flat**, the fourth.

Bar three, the chord adds a **ninth** and the vocal falls to **C**, the ninth.

Bar four, the chord returns to B-flat over D and the vocal returns to **D**.

The vocal is the top voice of whatever added tension the chord carries in that bar.

Across the rest of the record the vocal carries the third or the seventh the power chord leaves out, and the vocal-against-chord friction does the work.

Endless Summer works the opposite way.

The chord spells its own extensions here, and the vocal walks in lockstep with them, one to one, four bars in a row.

The trick is doubling, not opposing, and it keeps the major third stable and audible for the flip that follows in the next section.

♩ = 140

	D	E♭	C	D
	B♭/D	B♭sus4	B♭9	B♭/D
Vocal (D E♭ C D cell)	 M3	 4	 9	 M3
Guitar	 1 0 2	 1 0 3	 1 0 5 2	 1 0 2
Bass	 D 2	 B♭ 3	 B♭ 3	 D 2

Figure 6.1 · The verse cell: D, E♭, C, D over B♭/D, B♭sus4, B♭9, B♭/D, the vocal doubling each added tension.

FAVORITE MOMENT The vocal moving to E-flat exactly as the guitar's suspended fourth arrives, then falling to C exactly as the guitar's ninth enters, the vocal and the chord sounding the same added tone in each bar for four bars running.

The third flip · D becomes C-sharp, B-flat major becomes B-flat minor

The same sustained note carries the song's sharpest move.

The voice trades its D for a C-sharp in the same melodic slot, and that half-step turns the home chord over.

D is the major third of B-flat, C-sharp is the D-flat enharmonic, the minor third.

The home chord switches from B-flat major to B-flat minor on one sung step, the brightness flipping to shadow inside a single phrase.

Nothing else has to change for the flip to work.

The bass keeps B-flat, the floor stays put, and the whole quality of the chord rides on whether the voice sings D or C-sharp.

The song keeps its harmony still and lets the third decide major or minor, the same contested-third idea the record returns to.

Here it happens on one note bending a half-step.

$\text{♩} = 140$

	D	C#	D	C#
	B $\flat$ /D	B $\flat$ m/C#	B $\flat$ /D	B $\flat$ m/C#
Vocal (D -> C#)				
Guitar (Bb major -> Bb minor)				
Bass (holds Bb)				

Figure 6.2 · The third flip: D against C# over a held B ♭ bass.

FAVORITE MOMENT The voice trading a D for a C-sharp in the same slot, flipping the home chord from B-flat major to B-flat minor on one half-step.

The outro · framed by the dominant, B-flat to F7sus2, ending third-less

The close rocks the home chord against its dominant.

The guitar trades a B-flat-five with an F seven suspended, **the one chord against the five chord**, the dominant framing the song the same way the F-area intro did at the open.

The Songsterr GP chart for this chapter shows that rock as B-flat to F, the bookend the whole track sits inside.

The motion stays plain and the two chords trade to the end.

The last sound is a bare B-flat-five, no third.

After a song that spent its length deciding whether the third was a D or a C-sharp, major or minor, **the close declines to pick either**.

It ends on the open power chord, the third left out, the major-or-minor question left open.

The dominant frames the song and the bare home chord finishes it third-less.

♩ = 140

B ♭ 5 (I) F7sus2 (V) B ♭ 5 (I) B ♭ 5 (bare, no 3rd)

Guitar (Bb5 <-> F7sus2)

Bass (Bb <-> F)

Bb F Bb Bb

Figure 6.3 · Outro: B ♭ 5 rocking against F7sus2, the bare close.

FAVORITE MOMENT The close rocking B-flat against an F7sus2 dominant and ending on a bare third-less B-flat, the major-or-minor question left open.

Coda

Endless Summer is the record's cleanest laboratory.

It isolates the recoloring move the other songs embed in bigger structures and runs it on a single held D, then proves the inverse with one half-step.

This chapter also carries two of the restart's corrections on its face: the old claim that the voice supplies the major third fell when the chart showed the third ringing in the bass, and the old plagal B-flat-to-E-flat outro fell when the chart showed B-flat against F.

The vetted read is stranger and better, a song framed by its own dominant that still refuses to spell its third at the door.

SOURCES

The Songsterr GP MIDI (guitar, bass, full vocals) plus the bass, guitar and vocal stem MIDI's, aligned to the authority read at the v5 sheet.

Lazarus

C MINOR · DROP C · 4/4 · 117 BPM

Lazarus sustains a third-less C5 over a bass that walks E to F-sharp to D to F, **the F-sharp a tritone striking every other bar**, the voice falling F-E-D-C over the unsettled chord, the refrain opening to a flat-side A-flat to E-flat to B-flat as the lyric says the best of all is when it opens up, and the outro calling the dead man up over an A-flat-major-seven glow.

This is the album's grief song, and its harmony grieves the same way its words do.

The engine · a third-less C5 over a bass walking into the tritone

Lazarus runs on one frozen shape and a walking floor.

The guitar sustains a C5, the root and fifth with no third, and never changes it.

The bass walks underneath through E to F-sharp to D to F, **renaming the chord on every step while the hand above stays still.**

The third is absent the whole time, so the song keeps its major-or-minor color open.

The F-sharp is the bite.

It is the tritone against the C, the most foreign note to the key, and **it strikes every other bar as the bass cycles.**

That tritone is the dissonance the whole song circles, a recurring shadow under the held C5.

The engine states the song's tension once and rides it.

♩ = 117
C5

Guitar (C5, no third)

Bass (E F# D F)

4 6 2 5

Figure 7.1 · The engine: C5 held over the E, F#, D, F bass walk.

FAVORITE MOMENT A third-less C5 held still as the bass walks E to F-sharp to D to F, the tritone F-sharp arriving every other bar.

The verse · the voice falls F, E, D, C over the unsettled chord

The verse keeps the C5 and adds the voice.

The singing falls in a slow descent, F to E to D to C, **four steps down over the unsettled chord**.

The line moves at a quarter-note pace, each pitch dwelt on against the third-less floor underneath.

The descent carries the words about the hair on your head sewing you to the bed.

The voice does the coloring that the guitar does not.

Over a chord with no third, **the falling line traces the minor shape of the key**, the melody supplying the darkness the held C5 leaves open.

The bass keeps its tritone walk beneath, so the verse stays unsettled even as the voice draws a clear line down.

The descent is the song's grief made into a melody.

♩ = 117

F
C5 E D C

Vocal (falls F E D C)

Bass (tritone walk)

Measure	1	2	3	4
Vocal	F4	E4	D4	C4
Bass	E3	F#3	D3	F4

Figure 7.2 · Verse: the F, E, D, C descent over the tritone walk.

FAVORITE MOMENT The voice falling F, E, D, C in a slow minor descent over a chord that spells no third, the melody drawing the darkness the guitar leaves open.

The refrain · the floor opens to the flat side, acting out the lyric

The refrain leaves the C floor and opens to the flat side.

The guitar lifts through A-flat to E-flat to B-flat, **the flat-sixth and flat-third and flat-seventh of C minor, three borrowed chords climbing in a row.**

After a verse fixed on one shape, the harmony finally moves, and it moves upward and brighter.

The floor opening is the whole gesture.

The lyric and the harmony say the same thing at once.

The words are the best of all is when it opens up, and **the chords open exactly there**, the built tension of the engine releasing into the flat-side lift.

The music acts out the line as the singer delivers it.

The refrain is the song's one stretch of release.

$\text{♩} = 117$

	best	of	all	opens-up
	A ♭		E ♭	B ♭
Vocal				
	3	3	3	2
Guitar (flat-side lift)	A ♭ (bVI)		E ♭ (bIII)	B ♭ (bVII)
	2	2	3	1
	0	0	0	3

Figure 7.3 · Refrain: the $\flat$ VI, $\flat$ III, $\flat$ VII lift under the opening line.

FAVORITE MOMENT The flat-side lift A-flat to E-flat to B-flat opening under the words the best of all is when it opens up, the harmony acting out the lyric.

The outro · dance Lazarus arise over an A-flat-major-seven glow

The outro calls the dead man up.

The voice sings dance Lazarus arise over **a warm A-flat-major-seven glow**, the chord ringing bright as a synth pad sustains it.

The bass that drove the whole song through its tritone walk drops away here, leaving the chord to hang.

The song lifts its title into the open air.

The glow is the answer to the engine's tension.

After a verse falling minor over a third-less floor, the close settles on a major-seven chord that rings and sustains rather than resolving by a hard cadence.

The pad keeps it open as the voice repeats the call.

Lazarus ends by raising its own dead into a warm chord that simply glows.

Vocal (dance Lazarus arise)

Synth pad (Ab-maj7 glow)

A ♭ maj7 glow

Figure 7.4 · Outro: the A ♭ maj7 glow under "dance Lazarus arise."

FAVORITE MOMENT The voice singing dance Lazarus arise over a warm A-flat-major-seven glow as the bass drops away and a synth pad holds the chord open.

Coda

Lazarus is the album's clearest case of harmony as narrative.

The tritone walk is the sickbed, the falling verse is the grief, the flat-side lift opens on the exact word about opening, and the ending is a resurrection voiced as a major-seven chord with no floor under it.

The restart matters here too: an earlier pass guessed this song instrumental, and the vetted scores showed a full vocal, the call in the title sung out loud.

The song the fraud check recovered turned out to be the most openly emotional read on the record.

The vetted model-rebuild vocal and chord scores plus the Songsterr GP MIDI (guitar and bass) and the bass and guitar stems, aligned to the authority read.

C minor, Drop C.

Four sections: the engine, the descent, the flat-side refrain, the A^bmaj7 outro.

Not Too Much

A^b MAJOR · 4/4 · ~85 BPM

Not Too Much opens by hiding its root behind first-inversion chords, rocks two major chords a whole step apart, **slips a chromatic C-sharp through a sustained B-flat in the chorus as the voice climbs to its highest note**, flickers major-to-minor in a bass-less bridge, and closes on a D-major triad a tritone from its A-flat home.

The title is the harmonic plan: not too much resolution, anywhere, ever.

The intro · the song keeps its root out of the voicing, first inversions with no bass

Not Too Much states its home key by hiding its root.

The rhythm guitar alternates two upper-voice triads in first inversion, B-flat over D and A-flat over C, **the major third of each chord set as the lowest sounding pitch**.

The bass guitar stays out for four bars, so that guitar third is the actual floor.

In A-flat major the move is a two chord in first inversion easing to a one chord in first inversion.

The song keeps its root back on purpose.

When the bass finally enters at bar three and a half on A-flat, rooting the home chord on the downbeat of bar four, **the identity commits for the first time**.

The four-bar delay keeps the harmonic floor floating, neither chord planted on its own root.

The opening is the song refusing to commit until it chooses to.

♩ = 85

B ♭ /D A ♭ /C B ♭ /D A ♭ /C

Rhythm gtr (first inversions)

Figure 8.1 · Intro: B ♭ /D and A ♭ /C first inversions, no bass.

FAVORITE MOMENT Two first-inversion chords with the major third in the bass and no root for four bars, the song floating its own floor before it commits.

The main · two major chords a whole step apart, no dominant between them

The song's main move rocks two major chords a whole step apart, B-flat and A-flat.

The bass walks under both, B-flat then A-flat, with quick chromatic approach tones brushing through on the way.

The rhythm guitar voices the B-flat side as a stacked root and fifth and octave and the A-flat side as a fuller major triad.

The two chords trade with no dominant between them, a flat-side rock instead of a functional cadence.

The seam between the two chords is the interesting part.

A-flat is the flat-seven of B-flat and the root of the next chord at the same time, **one pitch belonging to both.**

The rocker turns on that shared tone, the harmony rocking a whole step with a common thread tying it together.

The song keeps its motion small and its center loose, two chords doing the work of a whole progression.

♩ = 85

Rhythm gtr (Bb <-> Ab)

Bb Ab Bb Ab

Bass

Bb Ab Bb Ab

Figure 8.2 · The main: the B $\flat$ to A $\flat$ whole-step rocker.

FAVORITE MOMENT Two major chords a whole step apart trading with no dominant between them, A-flat the hinge that belongs to both.

The chorus · a chromatic C-sharp under a sustained B-flat, the voice climbing to F₄

The chorus plants a B-flat and slips a chromatic C-sharp through it.

The rhythm guitar lays a B-flat bed, B-flat and F and B-flat, then alternates a C-sharp voicing into it, C-sharp and A-flat and C-sharp, the C-sharp the enharmonic D-flat of the song's D-flat field.

That chromatic C-sharp is the bite of the chorus, a half-step rub leaning against the sustained B-flat.

Around it the guitar brushes a brief E-flat and C and A-flat before settling back on the B-flat.

Over the sustained floor the voice climbs.

It walks D₄ to E₄ to F₄ and rests on F₄, **the highest pitch in the song**, ringing on

as the B-flat stays underneath.

The chromatic C-sharp in the guitar and the climbing vocal pull in opposite directions, one a dark half-step against the root, the other a bright reach to the top.

The chorus is a sustained B-flat colored by a chromatic C-sharp, the voice rising over both.

Figure 8.3 · Chorus: the C $\sharp$ rub through the held B $\flat$, the vocal climb to F4.

FAVORITE MOMENT A chromatic C-sharp slipping through a held B-flat, the dark half-

Verse one · the voice riding the seam, root down to the flat-seven

Quick sixteenth-note approach tones brush past as the bass moves.

The voice enters on B-flat, the root of the first chord, then slides down to A-flat, the flat-seven of B-flat.

Under the A-flat chord the line descends through E-flat and G and F, all diatonic to A-flat major.

The G is the major seventh, the most expensive interval in the key, and the F is the sixth, the song's home-but-not-quite tone.

The singer carries "It's more than make believe, there's things I can't unsee" across that descent.

Vocal (audio)

Bass

Figure 8.4 · Verse: the vocal riding the B $\flat$ -to-A $\flat$ seam.

FAVORITE MOMENT The voice sliding from the B-flat root to the A-flat flat-seven, then down through the major seventh, the most expensive interval in the key.

The bridge · major to minor on the same root, guitar alone, bass silent

The bridge carries the song's central flip and the band drops the bass to underline it.

For eight bars the rhythm guitar alone carries the chords.

It opens on C over E, a C major triad with the major third in the bass, then lifts to A-flat-add-nine and B-flat-add-nine, both bright.

The floor stays guitar-only, no bass to root the C-over-E triad.

Then the trick arrives.

The rhythm guitar plays both E-natural and E-flat in the same measure, **flickering between C-over-E and C-minor-over-E-flat, major to minor on the same root.**

The whole shimmer turns on which third the strummer picks up next.

The bass does not enter to settle it, and the major-or-minor question stays open until the chorus reprise walks the floor back to A-flat.

$\text{♩} = 85$
M3 (E) in bass

Rhythm gtr (C/E $\leftrightarrow$ Cm/E $\flat$)

Figure 8.5 · Bridge: the C/E to Cm/E $\flat$ flicker with the bass silent.

FAVORITE MOMENT The rhythm guitar sounding both E-natural and E-flat in one

measure, major to minor on the same root, the bass refusing to confirm either.

The outro · clusters tightening, ending on D major a tritone from home

The song lives in the A-flat field through the verses and the chorus.

The outro refuses to go home.

The bass walks chromatically downward, A-flat to E to E-flat to D, and the rhythm guitar plays four-note clusters that tighten each bar, the E lowering to E-flat as the bass descends.

The four-note clusters tighten a half-step each bar instead of opening out.

On the final bar the rhythm guitar opens to a clean D-major triad and the song stops there.

D is a tritone from A-flat, the chord most foreign to the home key, and the song does not walk back.

The title gets stated in harmony at the close, not too much resolution, no plagal cadence, no return to the home chord.

The song halts a tritone away from where it started.

♩ = 85

ends a tritone from Ab

cluster cluster (E → E $\flat$) D major

Bass (walks down)	Ab	E	E $\flat$	D

Figure 8.6 · Outro: the chromatic walkdown to a D-major stop.

FAVORITE MOMENT The song ending on a D-major triad, a tritone from its A-flat home, refusing the resolution the title warns against.

Coda

Not Too Much is the album's most architectural refusal.

It hides its root at the door, runs on two chords with no dominant, rubs a chromatic half-step through its chorus, flickers its third with the bass silenced, and exits a tritone from home.

Every section is a different way of saying the title.

The restart earned its keep here too, cutting the old claim of a held F4 vocal drone; the vetted read is a climb that rests at the top while the B-flat floor does the sustaining.

SOURCES

The corrected full MIDI plus vocal, bass and guitar stem MIDIs, reusing the vetted GP-sourced chapter and the model-rebuild scores.

A $\flat$ field, about 85 BPM.

The chapter carries a tuning ambiguity between Drop D and Drop C in the source cards, so the figures use chord and scale-degree maps, correct under either tuning.

Interactive sheet: </believeyoume-nottoomuch-v5>

Broken Satellites

E $\flat$ MAJOR, LIVED ON ITS OWN DOMINANT · DROP C · 4/4 · 116 BPM

Broken Satellites lives on its own dominant, **a B-flat surface floating over an E-flat center**, the voice sustaining one D that recolors as the major seventh over E-flat, the root over D, and the sixth over F, a chromatic sharp-four

ringing in the pre-chorus, a parallel-minor flip in the chorus, and a flat-seven outro cluster that grinds a half-step and refuses to resolve.

One sung pitch wears three hats, and the song never lets the satellite lock into orbit.

The intro · a rootless E-flat cluster hung in space, no bass

Broken Satellites hangs three notes in space and leaves out the one that would tell you the chord.

The rhythm guitar sustains F and G and B-flat, **the ninth and major third and fifth of E-flat, with no root anywhere.**

For four bars the cluster just rings, and the E-flat tonic is implied by the note that stays missing.

The listener hears the open fifth of B-flat and F with the G coloring the middle.

The voicing stacks the ninth right over the third and fifth, a close cluster that creates the hovering effect the verse will exploit.

When the bass enters at bar four on D, not E-flat, and the guitar shifts to a D power chord, **the song plants its central trick early.**

That D will return as the major seventh of E-flat the moment the voice arrives.

The pivot is set up ahead of the first sung word.

$\text{♩} = 116$
9 + M3 + 5
E ♭ (no root) D5 (bass enters)

Rhythm gtr (rootless Eb)

1 2 1 2 1 2 3 2
5 2 5 2 5 2 3 2

Figure 9.1 · Intro: the rootless F + G + B ♭ cluster, bass entering on D.

FAVORITE MOMENT Three notes hung in space, the ninth and third and fifth of E-flat with the root left out, the tonic named by what is missing.

The verse · power chords with the color in the voice, one sung D doing three jobs

The verse runs on power chords with the color living entirely in the voice. Over an E-flat-five the line climbs B-flat to D to E-flat, and **that D is the major seventh of E-flat, a glassy half-step under the root.**

The bass then drops to D and the same D becomes the root of a D power chord. The voice falls D to C to B-flat, the root and flat-seven and flat-six, into a rock-modal dark.

Then the bass moves to F and the D returns one more time, now as the sixth, a color a power chord cannot supply on its own.

One pitch does three jobs across the verse, major seventh, then root, then sixth.

There is no diminished chord anywhere, only E-flat-five and D-five and F-five and a voice re-reading its own D.

The song's whole idea is that single note changing meaning under a moving floor.

♩ = 116

5 root 6
E ♭ 5 maj7 root D5 b7 b6 F5

Vocal (one D, 3 jobs)

E ♭ 5 D5 F5

Rhythm gtr (Eb5/D5/F5)

The musical score is written for a vocal line and a rhythm guitar line. The tempo is 116 bpm. The key signature has two flats (B-flat and E-flat) and the time signature is 4/4. The vocal line features a single D note that functions as the major seventh of E-flat, the root of D5, and the sixth of F5. The rhythm guitar part consists of power chords: E-flat 5, D5, and F5. Fingerings are indicated for both parts.

Figure 9.2 · Verse: the one D re-read as maj7, root, and 6.

The bridge · six to five to one, the only real cadence in the song

The rhythm guitar walks C-five to B-flat-five to E-flat-five, which in E-flat major stands as **the six chord to the five chord to the one**.

The voice rides the major third over the six chord and the fourth over the five chord into the resolution.

The verses trade roots with no dominant and the chorus stacks the tonic without moving.

Then it hands back to the power-chord world and the resolution does not come again.

♩ = 116

M3 4 landed

C5 (vi) B♭5 (V) E♭5 (I)

Vocal

Rhythm gtr (vi V I)

Figure 9.3 · Bridge: C5, B ♭ 5, E ♭ 5, the vi-V-I walk.

FAVORITE MOMENT The one real cadence in the song, a six to five to one walk that arrives by function where the rest of the song only rocks.

The pre-chorus · the tritone A on top, then a fast ladder down

The pre-chorus opens on the boldest dissonance on the record.

The rhythm guitar sustains an E-flat power chord with an A-natural on top, **the sharp-four, the tritone of E-flat.**

That A is the most foreign tone to E-flat major, and the band lets it ring for four full bars under the line about not waking someone.

The chord refuses to soften the rub.

Then the harmony walks a fast ladder down.

The guitar steps G-five to A-flat-five, sustains C-five for two bars as the brightest moment, then drops B-flat-five to A-five and rings the A.

Six chords move in six bars, the longest stretch of real chord motion in the song.

The ladder settles on an E-flat-major-nine with no third, where the chorus begins and the held vocal D returns.

♩ = 116

A-nat = tritone on top

Rhythm gtr (Eb5 + tritone A)

7 6 7 6 2 3 2 3 2 0

Figure 9.4 · Pre-chorus: the E ♭ 5 with the #4 on top, into the ladder.

The chorus - the held D turns from major seventh into the root of D minor

The voice arrives on D4, the major seventh, the same note it sang in the verse. The chord spells everything except the third, leaving the voice to color it.

The singer carries "the human eye closes in the light" across the shift.

Musical score for "Vocal (D = maj7 -> root)" and "Rhythm gtr (Ebmaj9 -> Dm)". The score is in 4/4 time, with a tempo of 116 BPM. The key signature is E-flat major (three flats). The vocal line features a melodic phrase starting on D4, moving to E-flat4, and then to D4. The guitar line provides a harmonic accompaniment, starting with a D4 chord and moving to an E-flat major 9th chord.

Vocal (D = maj7 -> root)

Musical notation for the vocal line, showing a melodic phrase in 4/4 time. The notes are D4, E-flat4, and D4. The tempo is 116 BPM.

Rhythm gtr (Ebmaj9 -> Dm)

Musical notation for the guitar line, showing a harmonic accompaniment in 4/4 time. The chords are D4 and E-flat major 9th. The tempo is 116 BPM.

Figure 9.5 · Chorus: E ♭ maj9 dropping to Dm under the held D.

FAVORITE MOMENT The held D turning from the major seventh of E-flat into the root of D minor, the voice still as the chord redefines it underneath.

The outro · a cluster held seven bars over a half-step grind, never resolving

The outro hangs the song on a cluster that never resolves.

The rhythm guitar rings C and D and E-flat and G sustained for seven bars, **a dense stack the song treats as a suspended flat-seven rather than a home.**

After living its whole length on the B-flat surface above an E-flat center, the close declines to reach the tonic and lets the cluster ring unresolved.

The intro hung three of these tones with no root, and the outro adds the rest and still refuses to cadence.

Underneath the stack the bass plays a half-step ostinato, E-flat to E and back, **the chromatic neighbor grinding against the bottom** and keeping the chord from settling.

The lead guitar adds a single D late, then silence, so the song's central pitch, the major seventh the chorus built on, is the last note heard.

The satellite stays out of orbit, the ending suspended rather than resolved.

♩ = 116
root+M3+9+6
E ♭ 6

Rhythm gtr (Eb6/9)

Bass (Eb <-> E grind)

Figure 9.6 · Outro: the C + D + E ♭ + G cluster over the E ♭ -to-E grind.

FAVORITE MOMENT A dense seven-bar cluster the song hangs on without resolving, the bass grinding a half-step against the bottom and the close declining to place its tonic.

Coda

Broken Satellites is the album's recoloring device pushed to its furthest orbit. The intro marks the key by absence, the verse re-reads one D three ways, the bridge spends the song's only cadence, the pre-chorus hangs the tritone in the open, and the ending grinds a half-step under a stack that will not settle.

The restart cut the overstated "three jobs at once" framing down to what the corrected audio-truth model shows and killed the phantom diminished chord; what survived is stranger, a song that keeps its brightest pitch, the major seventh, as the last sound in the air.

SOURCES

The corrected audio-truth MIDI plus vocal, bass and guitar stem MIDIs, reusing the vetted GP-sourced chapter and the model-rebuild scores.

Drop C, E^b center, 116 BPM, aligned to the ixi-v5 authority: the song lives on its own dominant, and the outro read was corrected from "most-resolved tonic" to the authority's non-resolving cluster.

Interactive sheet: [/believeyoume-brokensat-v5](#)

10

Jackie

A^b MAJOR / LYDIAN · DROP C · 4/4 · 144 BPM

Jackie closes the album in A-flat major and Lydian, **the intro hiding the root behind an F and G that ring the sixth and seventh of an A-flat left unplayed**, the voice spelling an A-flat-major-seven through the verse, the dominant opening in the chorus, a Lydian brightening in the bridge, and an A-flat-to-C-minor vamp that will not end under a high lead cluster.

The record that spent nine songs hiding thirds ends by hiding the root itself.

The intro · a rootless A-flat, home hidden behind its sixth and seventh

Jackie opens by hiding its home.

The guitar rings an F and a G together, **the sixth and the major seventh of A-flat, while the A-flat root itself stays silent.**

The two upper tones outline the chord through what rings above it, the foundation left out.

The song states its center by pointing at the notes around it.

The raw chart heard the low pitches and called these C chords, and the vetted reading is a rootless A-flat.

The F and G are extensions of the home key, not the body of a C chord.

The intro is the song withholding its root on purpose, the same hidden-home idea the whole closer turns on.

The A-flat is present as an absence.

♩ = 144
A ♭ (no root)

Guitar (rootless A♭)

Figure 10.1 · Intro: F + G, the M6 and M7 of a rootless A ♭.

FAVORITE MOMENT An F and G ringing the sixth and seventh of an A-flat that never plays, the home chord present only as the notes around it.

The verse · the voice spells an A-flat-major-seven from the top

The verse hands the chord to the voice.

Over an A-flat floor the singing walks the tones of an A-flat-major-seven, **C the major third, B-flat the ninth, G the major seventh, F the sixth, E-flat the fifth.**

The line spells the full extended chord from the top, the guitar holding the floor and the voice tracing the color.

The words are why did you make a mess.

The major seventh is the most stressed of those tones, **the expensive G that gives the verse its tender, suspended feel.**

The harmony barely moves, the section resting on one A-flat while the voice traces its upper structure.

Jackie builds its verse from a fixed home and a melody that decorates it.

The feeling lives entirely in the line above the floor.

♩ = 144
C

A ♭ maj7 B♭ G F E♭ C G

Vocal (spells Abmaj7)

Bass (Ab floor)

Figure 10.2 · Verse: the vocal spelling A ♭ maj7 over the held floor.

FAVORITE MOMENT The voice spelling an A-flat-major-seven from the top, C and B-flat and G and F and E-flat, the major seventh the tenderest tone.

The chorus · the dominant E-flat opens, the voice rocking E-flat and F

The chorus opens onto the dominant.

The guitar moves to an E-flat with an added fourth, **the five chord of A-flat**, and sustains it while the bass walks underneath.

The chord keeps the A-flat tone on top, so the dominant carries a trace of the home it points back toward.

The harmony opens out rather than resolving.

The voice rocks two tones across the open chord, E-flat and F, a small back and forth over the sustained dominant.

The words are left alone, the line plain against the opening harmony.

The chorus widens the song without landing it anywhere, the dominant

suspended rather than pulled home.
It opens a door and stands in it.

♩ = 144
left lone

Vocal (rocks Eb F)

Guitar (Eb add4, the V)

Bass (walks)

The musical score is written for three parts: Vocal, Guitar, and Bass. The time signature is 4/4, and the tempo is 144 bpm. The key signature has three flats (Bb, Eb, Ab). The vocal line starts with a half note Eb, followed by a half note F, then a whole note Eb. The guitar line plays a sustained Eb add4 chord. The bass line walks down from Eb to C, then Bb to G.

Figure 10.3 · Chorus: $E\flat$ (add4), the V of $A\flat$, under the rocking vocal.

FAVORITE MOMENT The dominant E-flat opening with the A-flat tone kept on top, the voice rocking E-flat and F across the suspended chord.

The bridge · A-flat Lydian, the sharp-four brightening, the voice reaching high

The bridge brightens the floor into Lydian.

The lead guitar brushes a D natural over the A-flat, **the sharp-four, the one tone that turns plain A-flat major into A-flat Lydian.**

That raised fourth makes the harmony airier and stranger than the verse, a lift rather than a darkening.

The brightening is the section's whole move.

The voice reaches up to meet it, climbing to a high C and B and G over the Lydian floor.

The words are if I knew what to say, the line stretching into the upper register the verse stayed below.

The bridge is the song opening upward for a few bars, the sharp-four and the high vocal lifting together.

Then the floor settles back down toward the close.

♩ = 144

Ab G Ab Bb

Figure 10.4 · Bridge: the D $\sharp 4$ over the A $\flat$ floor, the vocal reach.

FAVORITE MOMENT The lead brushing a D-natural sharp-four to turn the floor Lydian, the voice reaching high C and B and G to meet the brightening.

The outro · an A-flat to C-minor vamp that will not end

The album ends on a vamp that does not close.

The harmony rocks an A-flat against a C minor, **the home and its relative shadow**, trading back and forth without ever cadencing.

Over the vamp a high lead cluster drones, a C and C-sharp and D held close together, a tight chromatic band ringing on top.

The figure repeats past where a song would normally stop.

That high C cluster is the sound the raw chart mistook for the key.

It works as a drone hung over an A-flat-centered vamp at the very end, never the center of the song.

The two chords keep trading and the cluster keeps ringing as the track fades.

Jackie closes the record on a vamp that resolves nothing and simply runs out.

$\text{♩} = 144$
C C $\sharp$ D
drone

Lead (C C $\sharp$ D drone)

Guitar (A $\flat$ <-> Cm vamp)

A $\flat$ Cm A $\flat$ Cm (fades, won't end)

Measure	Lead (C C $\sharp$ D drone)	Guitar (A $\flat$ <-> Cm vamp)
1	C C $\sharp$ D	A $\flat$
2	C C $\sharp$ D	Cm
3	C C $\sharp$ D	A $\flat$
4	C C $\sharp$ D	Cm (fades, won't end)

Figure 10.5 · Outro: the A $\flat$ to Cm vamp under the C, C $\sharp$, D drone.

FAVORITE MOMENT An A-flat to C-minor vamp trading without resolving, a tight C-C-sharp-D lead cluster droning over it as the record fades.

Coda

Jackie is the thesis of the record played one level deeper.

Nine songs hid the third and let a voice or a bass finally spell it; the closer hides the root, spells its home chord only from above, and exits on a vamp that never cadences.

The restart's last two corrections live here: the phantom "A $\flat$ floor" claim was cut, and the song itself was re-keyed to A $\flat$ after the raw chart mis-read its rootless voicings as C.

The album ends the way it worked, by making you hear a center nobody plays. Believe you me, the missing note was the point.

SOURCES

The vetted model-rebuild vocal and chord scores plus the Songsterr GP MIDI and the bass and guitar stems, aligned to the authority read.

A $\flat$ major and Lydian, Drop C, 144 BPM.

Five sections per the authority; the C cluster is only the outro lead drone.
